KONTAKT 61

LONG LIFE FOR NEW OR CLEANED CONTACTS

KONTAKT 61 is a special cleaning, lubricating and anti-corrosive agent designed for contacts and electromechanical moving parts, which have been cleaned using [KONTAKT 60](#).

KONTAKT 61 provides a high degree of protection against corrosion, and its microscopically thin protective film guarantees a high degree of contact. Furthermore, KONTAKT 61 prevents abrasion and seizing of contact strips and rails.

FEATURES	APPLICATIONS
<ul style="list-style-type: none"> Neutral active product. Does not cause or promote leakage currents. Has a distinct anti-corrosive effect. Is a first-class lubricant. Mechanical abrasion between contact surfaces is greatly reduced and the life of the connecting surfaces correspondingly increased if oxides are first dissolved using KONTAKT 60 and then rinsed with KONTAKT WL. Finally, the cleaned contact is protected by KONTAKT 61. 	<ul style="list-style-type: none"> Guarantees long-lasting oxidation-free contacts wherever they are needed: <ul style="list-style-type: none"> - Manufacturing - Repairs and servicing - Precision engineering - Clock-making - Instrument technology - Office machinery and many more

Color :	blue
Prolonged temperature resistance :	80 °C
Density at 20 °C :	0,76 g/cm ³
